ABOUT ME

Who am I?

Since I know myself that I'm passionate about technology, and since I started watching sci-fi movies, I see not only what technology is, but also what it can be.

This mindset has driven my interest in fields that may revolutionize how people interact with technology, bending the digital world to reality, through ubiquitous computing, extended reality, sensors, networking, internet of things and machine learning.

My professional experience bloomed through my Master's dissertation, which paved my way to the Research & Development environment, where I've been developing extended reality experiences, mobile applications, communication features, back-office systems, 3D scene configuration tools, and backend services, usually for industrial or learning contexts.

Given all of my professional, academic and personal experience and interests, I'm open to work in a wide range of things; either by taking advantage on domains and tools I've been working on professionally, or in the ubiquitous side that I'm particularly passionate about, not only in XR but also in IoT and sensorization. It's with the motivation to connect everything around the globe that I shoot for the stars, embracing the future and taking advantage of it, be it dominated by new technologies or by AI, and always looking for new challenges that let me be creative and that set me in the right path to revolutionize the world, not only in the mentioned fields, but also in others that let me learn and grow as a developer, researcher and person.

Hobbies

- App development
- Astrophotography
- Drawing
- Gym
- Hiking
- Listening to music
- Playing piano
- Stargazing
- Traveling
- Volunteering
- Watching movies/series
- Writing

Strengths

- Ambition
- Creativity
- Problem solving
- Proactivity
- Teamwork
- Versatility

Languages

- Portuguese Native
- English Professional
- Spanish Elementary
- German Elementary

SKILLS

Domains

- Backend
- Extended Reality
- Game Development
- Internet of Things
- Mobile Development
- Networking

Languages

- C
- C#
- Java
- Javascript
- Python
- SQL

Frameworks / Tools

- Android Studio
- MySQL
- Node.js
- Unity

EXPERIENCE

CCG/ZGDV Institute

May 2021 — Present | CVIG-CG — Computer Vision, Interaction and Graphics

- **Technical Project Coordinator** (since Jan 2025): Project: ECP — Ecoceramics and Crystalware of Portugal.
- **Development Technician, Assistant Researcher** (since Oct 2021): Development in Unity/C# of mixed reality remote assistance systems, 3D scene configurators, augmented reality mobile apps, gamified virtual reality apps, and backend services in Node.js.
- **Research Grant** (until Sep 2021).

EDUCATION

University of Minho

Sep 2016 — Mar 2022 | Bachelor's and Master's degree

- Telecommunications and Informatics Engineering
- Grade: **15.07 / 20**

Escola Secundária D. Sancho I

Sep 2013 — Jun 2016 | 10th–12th grade

- Science and Technology
- Grade: **14.75 / 20**

ACTIVITIES

Refood

Sep 2025 — Present | Volunteering

- I'm performing food collection and distribution routes and organizing it at the Operations Center, two hours each week.

Núcleo de Estudantes de Engenharia de Telecomunicações e Informática da Universidade do Minho

2019 — 2020 | Volunteering

- **Treasurer** (2020): I managed financial assets and liabilities.
- **Communications and Design Department** (2019): I designed posters and promoted events.

PROJECTS

CCG/ZGDV Institute

XR-GRIT

Sep 2025 — Ongoing

- Gamified VR training course for robotics instruction and training.

ECP - Ecoceramics and Crystalware of Portugal

Dec 2023 — Ongoing

- Digital Training Academy with virtual and immersive learning methods for continuous and advanced worker training.
- Role: Technical Project Coordinator.

HfPT - Health from Portugal

Oct 2023 — Ongoing

- Remote monitoring and telemedicine system for healthcare, and a set of interactive applications for anatomical pathology learning.

Cognitive CMMS - Cognitive Computerized Maintenance Management System

Jun 2021 — Jun 2023

- Mobile app to list and display assets info and tasks on a given location with indoor navigation system.

ADM.IN: Advanced Decision Making IN Productive Systems Through Intelligent Networks

Sep 2022 — Jul 2023

- Maintenance Configurator and Remote Assistance system for maintenance operations in AR.

TSIM - Test System Intelligent Machines

May 2021 — Oct 2022

- Auto diagnosis and validation system, with maintenance step-by-step holographic indications and remote assistance support.

Factory of the Future: Smart Manufacturing / P51 - Training for operators with new methodologies

Aug 2021 — Jan 2022

- Gamified training and evaluation system for machine operations in VR and AR.

University

Augmented Reality System with Gamification for Education

Sep 2020 — Mar 2022 | 5th year

- Master's Dissertation.
- Grade: **19/20**.

VRollercoastAR

Sep 2020 — Feb 2021 | 5th year

- AR app to build rollercoaster tracks and VR app to ride them.

Detection of bike riding events with a mobile phone

Sep 2020 — Jan 2021 | 5th year

- Mobile app to detect bike riding events using a machine learning model based on the phone's sensors data.

PUBLICATIONS

Towards remote rehabilitation with gaming, digital monitor and computer vision technologies

2024 | ACM Digital Library

- Presented at Web3D '24: Proceedings of the 29th International ACM Conference on 3D Web Technology.

UX and Industry 5.0: A study in Repairing equipment using Augmented Reality

2023 | Springer

- Presented at ITET 2023 - International Conference on Information Technology and Education Technology.

Augmented Reality Towards Industry 5.0: Improving Voice and Tap Interaction Based on User Experience Feedback

2023 | Springer

- Presented at ITET 2023 - International Conference on Information Technology and Education Technology.

Generic XR game-based approach for industrial training

2022 | IEEE

- Presented at ICGI'2022 - International Conference on Graphics and Interaction.

QuizHuntAR: A location-based Augmented Reality game for education

2021 | IEEE

- Presented by me at ICGI'2021 - International Conference on Graphics and Interaction.

Corporate messaging and alerting services for vehicular networks

Feb 2020 — Jun 2020 | 4th year

- System composed of an IPv6 vehicular network, where vehicles communicate with each other through RSUs and OBUs.

SMAF.G7 - Physical activity monitoring system

Feb 2019 — Sep 2019 | 3rd year

- Physical activity monitoring system based on an Arduino with a set of sensors that send data to a set of hubs and management services.

Smart Health Control

Feb 2018 — Jun 2018 | 2nd year

- Mobile app to monitor user's health — steps counter, distance measuring, heart rate measure, calories and workout monitoring.
